

“I enjoy developing a long term relationship with clients as a member of their team to lend my architectural expertise where it is most needed in order to see the client’s vision brought to completion in an organized, thorough and expedient manner.”

Alan’s design skill and broad project experience enable him to propose creative solutions for meeting each client’s unique program. In his 10 years with Hughes Associates, he has been involved in all phases of design and management on over 70 projects including residential, multi-family, commercial, medical, and worship facilities.

Alan uses his first-hand construction experience to counsel clients through the critical early project design decisions by offering pragmatic solutions. He strives to prioritize objectives and respond quickly and completely to the project team’s needs.

He is currently managing a project applying for LEED (Leadership in Energy and Environmental Design) certification by the US Green Building Council. He also initiated and maintains a waste recycling program for our office.

Alan’s travels and immersion into foreign cultures enable him to offer unconventional solutions to traditional universal design problems.
